# Elevated Steel Water Tank

---

## Assembly Instructions

*To get the best results, you need to experiment with different papers and glues. In general, you should print on the heaviest paper you can find. I prefer a 180 gsm matte cardstock in A4 size paper (210 x 297mm) and a flexible transparent glue for vinyl or plastic. Ordinary white school glue also might be just fine.*

*Para obter os melhores resultados, você precisa experimentar diferentes papéis e colas. Em geral, você deve imprimir no papel mais pesado que puder encontrar. Eu prefiro uma cartolina fosca de 180 g/m² e uma cola transparente e flexível para vinil ou plástico. A cola branca comum escolar também pode ficar bom.*

*The main purpose of this steel tank is to store clean water by DMAE for human consumption. In actual size, the capacity would be 100 cubic meters of water (approximately 26,500 US gallons). The elevation is important to use the gravitational force to conduct the water into the pipes and distribute for the population.*

*O principal objetivo deste tanque de aço é armazenar água limpa pelo DMAE para consumo humano. Em tamanho real, a capacidade seria de 100 metros cúbicos de água (aproximadamente 26.500 galões americanos). A elevação é importante para usar a força gravitacional para conduzir a água pelos canos e distribuir para a população.*
